The foundation of the European Union was one of the most important historical events in the second half of the 20th century. In order to fully appreciate the modern state of the EU, it is crucial to understand the history of European integration. This accessible overview differs from other studies in its focus on the major roles played by both the United States and European multinational corporations in the development of the European Union. Chronologically written and drawing on new findings from two major archives (the archives of the US State Department and Archive of European Integration), this book sheds crucial new light on the integration process. The History of European Integration offers a major contribution to our understanding of Europe's postwar history, and will be essential reading for any student of postwar European History, Contemporary History, European Politics and European Studies.

'The topic is important and neglected and has major implications for the types of industrial policy that make any sense in transition countries. The clear message of this book is that protective science and technology policies would, for the most part, be a total waste of money. What is needed now is internationalization and a demand-driven approach, exactly the opposite of the former nationally based and supply-led systems existing under socialism.' - Paul Hare, Heriot-Watt University Edinburgh, UK 'Here is a book that goes beyond the abstractions and platitudes of conventional "transition economics" to look at what is really happening on the ground in the post-socialist countries of Eastern Europe . . . The Globalization of Industry and Innovation in Eastern Europe presents a provocative but richly documented assessment of the central dynamic issues facing the East European economies today.' - David Dyker, SPRU - Science and Technology Policy Research, University of Sussex, UK In this important book, industrial and enterprise reform over the last decade in Eastern Europe is critically reviewed in light of increasing Eastern integration into the global economy. The authors argue for the further globalization of Eastern European enterprise networks as a condition for recovery and growth in the region. Empirical evidence is provided from five industrial sectors (car industry, telecommunication, shipbuilding, computers, software), including case studies and international comparisons.
