Bugera's AC60 acoustic guitar combo amplifier offers plenty of power and a manageable size, making it a convenient solution for your acoustic amplification needs. The AC60's voice is clear and a true representation of your performance, thanks to the amp's 60 watts being projected through an 8" Turbosound speaker.

Bugera AC60 60-watt 2-channel Portable Acoustic Amp ...

Bugera's PS1 is a 100-watt tube amplifier attenuator that helps you achieve thick cranked-amp tone at much more manageable volumes. By placing it between your tube amp's speaker output and your speaker, you can turn your amp to its max, while bringing the volume down via the PS1.

THE TUBE AMP BOOK WITH AUDIO ONLINE ERRATA SHEET ADDED.

Engineering system dynamics focuses on deriving mathematical models based on simplified physical representations of actual systems, such as mechanical, electrical, fluid, or thermal, and on solving these models for analysis or design purposes. System Dynamics for Engineering Students: Concepts and Applications features a classical approach to system dynamics and is designed to be utilized as a one-semester system dynamics text for upper-level undergraduate students with emphasis on mechanical, aerospace, or electrical engineering. It is the first system dynamics textbook to include examples from compliant (flexible) mechanisms and micro/nano electromechanical systems (MEMS/NEMS). This new second edition has been updated to provide more balance between analytical and computational approaches; introduces additional in-text coverage of Controls; and includes numerous fully solved examples and exercises. Features a more balanced treatment of mechanical, electrical, fluid, and thermal systems than other texts Introduces examples from compliant (flexible) mechanisms and MEMS/NEMS Includes a chapter on coupled-field systems Incorporates MATLAB® and Simulink® computational software tools throughout the book Supplements the text with extensive instructor support available online: instructor's solution manual, image bank, and PowerPoint lecture slides NEW FOR THE SECOND EDITION Provides more balance between analytical and computational approaches, including integration of Lagrangian equations as another modelling technique of dynamic systems Includes additional in-text coverage of Controls, to meet the needs of schools that cover both controls and system dynamics in the course Features a broader range of applications, including additional applications in pneumatic and hydraulic systems, and new applications in aerospace, automotive, and bioengineering systems, making the book even more appealing to mechanical engineers Updates include new and revised examples and end-of-chapter exercises with a wider variety of engineering applications

Vinny Guadagnino, star of Jersey Shore, discusses his lifelong struggle to control the effects of social anxiety and stress, and teaches readers the tools and techniques he's used to stay calm and maintain his sanity in all types of crazy situations--both on and off the show. For more than a decade Vinny has been keeping a secret from his family, his friends, his castmates, and his fans: the fact that he's not as carefree and stress-free as he appears. Vinny suffers from panic attacks that strike without warning. They plagued him throughout his teens, forced him to move home from college, and tormented him during the first season of Jersey Shore. After fleeing the set during the filming of the fifth season of the show, Vinny realized he could no longer keep his problems to himself. It was time to speak out. In this book, Vinny discusses how he's confronted his demons head on, and he gives readers the tools to do so themselves. For the millions of his fans who are also feeling overwhelmed with the world around them and by their own thoughts, Vinny offers a practical plan for taking control of your life, your body, and your mind.

The National Research Council conducted a study to identify a set of incentives that state governments and local school districts can use to attract Ph.D. scientists and mathematicians to secondary school teaching positions. This project investigated the career ambitions of Ph.D.s in the physical and life sciences through focus groups and a national survey to determine the kinds of work conditions and compensation packages that would induce them to take positions teaching physics, chemistry, biology, and various electives in public high schools or positions developing secondary school science and mathematics curricula. The study conducted interviews with Ph.D.s who are already teaching in secondary schools to ascertain information from their experiences, with local school district administrators to assess what they are realistically willing to offer Ph.D. scientists to attract them, and with higher education administrators to explore programmatic changes they would need to institute to provide Ph.D.s with skills tailored to secondary school teaching. These investigations led to this report which describes the incentives local school districts could use in establishing pilot programs in this area.

Pulling great sounds in the studio is a peculiar mix of art and science. Mike Stavrou's unique perspective has helped thousands of readers via his column in AudioTechnology magazine, and now the closely guarded secrets of one of the world's top sound balance engineers have been laid bare in this book.

Presenting the hydrological research carried out in the Migina catchment (260 km2), Southern Rwanda with the objective to explore the hydrological trends and climate linkages for catchments in Rwanda (26,338 km2), and to contribute to the understanding of dominant hydrological process interactions. Different Hydro-meteorological instrumentations have been installed for several months in the Migina catchment and measurements have been carried out. The trend analysis is based on Mann-Kendall (MK) test and Pettitt test on times series data varying from 30 to 56 years before 2000. The hydrometric data and modern tracer methods is used for hydrograph separation and show that subsurface runoff is dominating the total discharge even during rainy seasons at Cyihene-Kansi and Migina sub-catchments, respectively. Further, a semi-distributed conceptual hydrological model HEC-HMS is applied for assessing the spatio-temporal variation of water resources in the Migina catchment. The model results are compared with tracer based hydrograph separation results in terms of the runoff components. The model performed reasonably well in simulating the total flow volume, peak flow and timing as well as the portion of direct runoff and baseflow.

Sound Systems: Design and Optimization provides an accessible and unique perspective on the behavior of sound systems in the practical world. The third edition reflects current trends in the audio field thereby providing readers with the newest methodologies and techniques. In this greatly expanded new edition, you'll find clearer explanations, a more streamlined organization, increased coverage of current technologies and comprehensive case studies of the author's award-winning work in the field. As the only book devoted exclusively to modern tools and techniques in this emerging field, Sound Systems: Design and Optimization provides the specialized guidance needed to perfect your design skills. This book helps you: Improve your design and optimization decisions by understanding how audiences perceive reinforced sound Use modern analyzers and prediction programs to select speaker placement, equalization, delay and level settings based on how loudspeakers interact in the space Define speaker array configurations and design strategies that maximize the potential for spatial uniformity Gain a comprehensive understanding of the tools and techniques required to generate a design that will create a successful transmission/reception model

The author has made a successful attempt to script a social and political life of Hindustan of the period stretching from 1200-1550 AD. The author very convincingly brings home the impact of the invasion of the Muslim on the ancient Hindu order which was almost completely destroyed. The book draws a clear picture of how the early Muslim invaders succeeded in levying foundations which proved strong enough for the later Mughals in raising their glorious edifice. Thereby, the author proves that how Akbar as well as his successors followed the pattern, their Turkish and Afghan predecessors had shaped for them.

This tell-all memoir reveals the details behind Sunday Times journalist Mzilikazi wa Afrika's exposure of the R1.7 billion lease scandal between police commissioner Bheki Cele and property tycoon Roux Shabangu, for which he was infamously arrested in 2010. It is also the riveting account of how a neglected boy in an unknown village became one of South Africa's most awarded investigative reporters and found himself at the receiving end of the corruption that had defeated those he helped put in power. Fearless in the face of corrupt authorities with sinister political motives, and fervent about justice, Wa Afrika's life was characterised by resistance to oppression and inequality from an early age. Destined to defend and uphold the principles of democracy, his story is the inspiring tale of an ordinary man, armed with a pen, who challenged the proverbial giant.

A play-along transcription book of Chad's very popular video. Nine tracks are presented without drums so you can play along with some of the Red Hot Chili Peppers' most popular tunes such as "Give It Away," "Suck My Kiss," "Breaking the Girl" and more. Includes an incredible ten-minute jam with Flea.
