"This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machines. The book seeks to explain why a little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

An essential guide to ignition and timing, for classic car owners and restorers. Aimed at both keen amateurs and professionals alike, Ignition and Timing covers the history and evolution of the automotive ignition system, and how to fit, modify and maintain your system for optimum timing and maximum performance. Topics covered include understanding and fault-testing the coil ignition system; post-war distributors and aftermarket systems; how to fit electronic ignitions and modify the distributor, including twin-point distributors; rebuilding and maintenance; Lucas, Delco and Bosch systems; identification charts for your distributor and finally, how to achieve optimum timing and how to use a timing light. Fully illustrated with 90 colour images and 10 diagrams.

This is the second, entirely new edition of the phenomenally successful annual guide to all the new production and concept cars unveiled during the twelve months prior to the book's publication. An easily navigated A-Z of all the latest models from around the world, this book engagingly describes and illustrates around 130 cars, highlighting their key stylistic features and innovations. Each vehicle is brought vividly to life in a series of stunning photographs and original renderings, showing exterior and interior design features, the vehicle's stylistic development and its engine layout--800 colour illustrations in all. Available technical data for every car is also provided. The Car Design Yearbook is the most comprehensive annual reference to the latest trends in car design worldwide ever published. No one interested in cars--whether as an industry insider or a car enthusiast--can afford to be without this definitive guide.

This first book of its kind tells the behind-the-scenes story of the incredibly illegal Cannonball rally. This best seller is now available in paperback!In the early 1970s, Brock Yates, senior editor of Car and Driver Magazine, created the now infamous Cannonball Sea-to-Shining-Sea Memorial Trophy Dash: a flat out, no-holds-barred race from New York City to Redondo Beach, California. Setting out to prove that well trained drivers could safely navigate the American highways at speeds in excess of the posted limits, Mr. Yates created a spectacle reminiscent of the glory days of the barnstorming pilots. Filled with fascinating unpublished stories, nostalgic and modern-day photographs, inside information and hilarious stories from this outrageous and incredibly immoral rally, Brock is one of the best-known, most respected automotive journalists in the world today.

\*Provides service and repair information for the fifth generation, also known as the A5 platform Volkswagen Jetta\*--Provided by publisher.

This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and turbofan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular considerations of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.
