Description. We had been through several issues with K-factor handling of two groups according to two different standards which uses same name. As it turns out, ANSI and DIN has defined the same term for the same purpose but with different reference points, so there is a serious ambiguation: K-factor (ANSI), K-factor (DIN) Expected behavior would be choosing a different name for the "second"

Advance steel used the DIN 6935 standard , this is very typical code and based upon internal radius value being the thickness of the materials , with a designated K factor.

It works to that with the standard bend radius from model and settings.

Alternatively there is MT default to change to a "By table method" this means you can override the din standard with you own parameters. I recently ...
