Nigella Collection: a vibrant new look for Nigella's classic cookery books. 'This is for those days or evenings when you want to usher a little something out of the kitchen that makes you thrill at the sheer pleasure you've conjured up.' The classic baking bible by Nigella Lawson ('Queen of the Kitchen' – Observer Food Monthly). This is the book that helped the world rediscover the joys of baking and kick-started the cupcake revolution, from cake shops around the country to The Great British Bake Off. How To Be a Domestic Goddess is not about being a goddess, but about feeling like one. Here is the book that feeds our fantasies, understands our anxieties and puts cakes, pies, pastries, preserves, puddings, bread and biscuits back into our own kitchens. With luscious photography, easy recipes, witty food writing and a beautiful hardback design, this is a book you will treasure for many years as well as a delicious gift for friends and family. Cakes - from a simple Victoria Sponge to beautiful cupcakes Biscuits - macarons, muffins and other indulgent treats Pies - perfect shortcrust and puff pastry and sweet and savoury recipes Puddings - crumbles, sponges, trifles and cheesecakes Chocolate - luscious chocolate recipes for sharing (or not) Children - simple recipes for baking with kids Christmas - pudding, Christmas cakes, mince pies... and mulled wine Bread - finally, the proof that baking bread can be

fun, with easy bread recipes The Domestic Goddess 's Larder - essential preserves, jams, chutneys, curds and pickles that every cook should have

Vintage camper trailers are a unique symbol of midcentury America that resonates with many people. This book introduces many of those people, along with the trailers they 've lovingly maintained or restored. It includes hundreds of photographs of everything from fancy and comfortable trailers designed for glamping (glamorous camping), to trailers handed down through families across generations, and even entrepreneurs who have transformed their trailers into vending booths. Paul Lacitinola enjoys everything about vintage camper trailers, including rescuing, restoring, and rallying. In 2011, he began publishing the first U.S.-based magazine for collectors, restorers, and admirers of American-made camper trailers, Vintage Camper Trailers, which now has thousands of subscribers in more than a dozen different countries. He lives in Elverta, California.

An ideal reference for design engineers and operators in water treatment, this manual of water supply practices describes ductile-iron pipe manufacturing, design, hydraulics, pipe wall thickness, corrosion control, installation, supports, fittings and appurtenances, joining, and installation.

From a military commander's perspective, the role of psychological operations (PSYOP) in the successful planning and execution of modern military operations is absolutely essential. It is an integral part of the United States Special Operations Command mission. Today, the military faces a dynamic and unpredictable world. PSYOP will remain a valuable instrument in the overall defense posture and will be a key asset in the fulfillment of U.S. national policy. This manuscript explores the breadth and depth of fundamental PSYOP roles, principles and methods. Each article is an independent effort and together they represent a cross section of what the best and brightest feel is key to both offensive and defensive psychological operations. Air University Press.

This text explains the concepts behind process design. It uses a case study approach, guiding readers through realistic design problems, and referring back to these cases at the end of each chapter. Throughout, the author uses shortcut techniques that allow engineers to obtain the whole focus for a design in a very short period (generally less than two days).

In the seventeenth century, even the most elaborate and fashionable gardens had areas set aside for growing herbs, fruit, vegetables and flowers for domestic use, while those of more modest establishments were vital to the survival of the household. This was also a period of exciting introductions of plants from overseas. Using manuscript household manuals, recipe books and printed herbals, this book takes the reader on a tour of the productive garden and of the various parts of the house - kitchens and service rooms, living rooms and bedrooms - to show how these plants were used for cooking and brewing, medicines and cosmetics, in the making and care of clothes, and finally to keep rooms fresh, fragrant and decorated. Recipes used by seventeenth-century households for preparations such as flower syrups, snail water and wormwood ale are also included. A brief herbal gives descriptions of plants that are familiar today, others not so well known, such as the herbs used for dyeing and brewing, and those that held a particular cultural importance in the seventeenth century. Featuring exquisite coloured illustrations from John Gerard's herbal of 1597 as well as prints, archival material and manuscripts, this book provides an intriguing and original focus on the domestic history of Stuart England.

The U.S. Department of Agriculture (USDA) Strategic Plan for fiscal year (FY) 2010–2015 targets the restoration of watershed and forest health as a core management objective of the national forests and grasslands. To achieve this goal, the Forest Service, an agency of USDA, is directed to restore degraded watersheds by strategically focusing investments in watershed improvement projects and conservation practices at landscape and watershed scales. The Forest Service formed the National Watershed Condition Team and tasked it with developing a nationally consistent, science-based approach to classify the condition of all National Forest System (NFS) watersheds and to develop outcome-based performance measures for watershed restoration. The team evaluated alternative approaches for classifying watersheds (USDA Forest Service 2007) and developed the watershed condition classification (WCC) system described in this technical guide. The team designed the WCC system to—Classify the condition of all NFS watersheds; Be quantitative to the extent feasible; Rely on Geographic Information System (GIS) technology; Be cost effective; Be implementable within existing budgets; Include resource areas and activities that have a significant influence on watershed condition. National forests are required to revise the classification on an annual basis. The WCC system is a national forest-based, reconnaissance level evaluation of watershed condition achievable within existing budgets and staffing levels that can be aggregated for a national assessment of watershed condition. The WCC system offers a systematic, flexible means of classifying watersheds based on a core set of national watershed condition indicators. The system relies on professional judgment exercised by forest interdisciplinary (ID) teams, GIS data, and national databases to the extent they are available, and on written rule sets and criteria for indicators that describe the three watershed condition classes (functioning properly, functioning at risk, and impaired function). The WCC system relies on Washington Office and regional office oversight for flexible and consistent application among national forests. The WCC system is a first approximation of watershed condition, and we will revise and refine it over time. The expectation is that we will improve and refine individual resource indicators and that we will develop databases and map products to assist with future classifications. The WCC information will be incorporated into the watershed condition framework, which will ultimately be employed to establish priorities, evaluate program performance, and communicate watershed restoration successes to interested stakeholders and Congress. The watershed condition goal of the Forest Service is “ to protect National Forest System watersheds by implementing practices designed to maintain or improve watershed condition, which is the foundation for sustaining ecosystems and the production of renewable natural resources, values, and benefits ” (FSM 2520). U.S. Secretary of Agriculture Tom Vilsack reemphasized this policy in his “ Vision for the Forest Service ” when he stated that achieving restoration of watershed and forest health would be the primary management objective of the Forest Service (USDA 2010). This Watershed Condition Classification Technical Guide helps to implement this policy objective by—1. Establishing a systematic process for determining watershed condition class that all national forests can apply consistently; 2. Improving Forest Service reporting and tracking of watershed condition; 3. Strengthening the effectiveness of the Forest Service to maintain and restore the productivity and resilience of watersheds and their associated aquatic systems on NFS lands.
