Los Angeles magazine is a regional magazine of national stature. Our combination of award-winning feature writing, investigative reporting, service journalism, and design covers the people, lifestyle, culture, entertainment, fashion, art and architecture, and news that define Southern California. Started in the spring of 1961, Los Angeles magazine has been addressing the needs and interests of our region for 48 years. The magazine continues to be the definitive resource for an affluent population that is intensely interested in a lifestyle that is uniquely Southern Californian.

When *On the Origin of Species* came out in 1859, it changed the understanding of life and was the foundation of evolutionary biology. All the material that he received for this book was from the famous expeditions he took on the *Beagle* during the 1830s. This is the story of that voyage. *A Naturalist's Voyage Round the World* follows Charles Darwin over his almost five-year journey around the world, in which he studied animals, plants, geology, and much more. From the tip of South America and the Galapagos Islands to Australia and Tahiti, Darwin set out to study geology, but ended up finding the information that would lead to his theory of evolution by natural selection. With the original images from Darwin's journal, *A Naturalist's Voyage Round the World* is an incredible look into the past at one of the most important documentations of a sea voyage ever. The information collected by Darwin changed our world, and now you can relive every moment in his own words and illustrations.

Author Page Keeley continues to provide KOC012 teachers with her highly usable and popular formula for uncovering and addressing the preconceptions that students bring to the classroom. The formative assessment probe in this first book devoted exclusively to life science in her *Uncovering Student Ideas in Science* series. Keeley addresses the topics of life and its diversity; structure and

function; life processes and needs of living things; ecosystems and change; reproduction, life cycles, and heredity; and human biology."

A young girl learns about predators and prey in the animal world when her cat Mouser is killed by a coyote.

Nobel-Prize-winning economist Paul Krugman argues that business leaders need to understand the differences between economic policy on the national and international scale and business strategy on the organizational scale. Economists deal with the closed system of a national economy, whereas executives live in the open-system world of business. Moreover, economists know that an economy must be run on the basis of general principles, but businesspeople are forever in search of the particular brilliant strategy. Krugman's article serves to elucidate the world of economics for businesspeople who are so close to it and yet are continually frustrated by what they see. Since 1922, Harvard Business Review has been a leading source of breakthrough management ideas—many of which still speak to and influence us today. The Harvard Business Review Classics series now offers readers the opportunity to make these seminal pieces a part of your permanent management library. Each highly readable volume contains a groundbreaking idea that continues to shape best practices and inspire countless managers around the world—and will have a direct impact on you today and for years to come.

A new edition of the classic study of the relationship between predator and prey follows the life cycles of the wolves in Michigan's Isle Royale National Park and the mood on the island, offering a firsthand account of the nearly fifty-year wildlife study, complemented by more than one hundred color photographs. Reprint.

Discusses prairies and their endangered status, describes the plants and animals that inhabit them, and encourages readers to plant native prairie plants in their backyards to sustain the insects and animals that depend on them.

Over recent years, human activities such as the burning of fossil fuels have increased the amount of carbon dioxide gas emitted to the atmosphere—and the amount that dissolves into the ocean. Now, so much carbon dioxide has been absorbed by the ocean that the chemistry of seawater is changing, causing the ocean to become more acidic. Based on a National Research Council report, this booklet describes the well-understood chemistry of ocean acidification and explores the many questions that remain: How will ocean acidification impact marine life such as fish, corals, and shellfish? How will the effects on individual species scale up to whole ecosystems? What will ocean
