ME Beam Engine. The Model

Engineer beam engine has been a popular model for more than a hundred years. It was first described by George Gentry in 1914. It was revisited by Exactus in 1959 and that is the version usually built today. The engine is of the centre column type and resembles that of the type of engine made by William Fairburn around 1840 - 1850.

describes the construction of a model of the Lampitt portable steam engine, which dates back to 1862, and which provided rotative power to drive threshing machines, circular saws, feed mills and other farm machinery. The construction of every component is described in precise detail and the text is supported by many helpful step-by-step photographs. In addition, useful advice is provided about obtaining materials and about the tools that are required to equip a model-engineering workshop. Accordingly, the information provided in this fascinating book will enable the reader to construct not only the Lampitt engine but also many other engineering models in the future. When the reader has finished building 'the Lampitt' he will, in effect, have completed an engineering
