In his 1987 work Paratexts, the theorist Gérard Genette established physical form as crucial to the production of meaning. Here, experts in early modern book history, materiality and rhetorical culture present a series of compelling explorations of the architecture of early modern books. The essays challenge and extend Genette's taxonomy, exploring the paratext as both a material and a conceptual category. Renaissance Paratexts takes a fresh look at neglected sites, from imprints to endings, and from running titles to printers' flowers. Contributors' accounts of the making and circulation of books open up questions of the marking of gender, the politics of translation, geographies of the text and the interplay between reading and seeing. As much a history of misreading as of interpretation, the collection provides novel perspectives on the technologies of reading and exposes the complexity of the playful, proliferating and self-aware paratexts of English Renaissance books.

An essential reference text, the fifth edition of this popular book details drugs in anaesthesia and intensive care in an A-Z format. The book describes the pharmacokinetics and pharmacodynamics of all the drugs commonly used by anaesthetists. The A-Z organisation allows rapid access to specific information on the properties and characteristics of almost 200 drugs. The new edition includes a complete revision of all the featured drugs, and the addition of key new drugs. New diagrams of particular drug structures and comparison tables aid comparison of differences within a drug class for exam revision. Improved navigation in the index enables prompt discoverability of information. Written in a concise, bullet-point style to allow quick access to information, the book contains all necessary drug references for anaesthetists in training, consultant anaesthetists, intensive care nurses, and anaesthetic assistants.

The fully revised, third edition of this bestselling Handbook describes best practice of critical care in a succinct, concise and clinically-orientated way.
