Graduates from this course have gone on to work in property development, surveying, project management and consultancy in roles such as: chartered general practice surveyor; chartered building surveyor; property developer; environmental impact auditor

Property Development Degree BSc (Hons) | University of ...

The raw land development process is often viewed as a complex investing strategy—one that only “experts” should consider taking on. While investing in undeveloped land is a complex strategy, beginners shouldn’t necessarily avoid it. In fact, I would argue that new investors can successfully invest in raw land if they mind due diligence and prepare for more work than what usually ...

Surveying is about mapping the natural and built environments. Surveying of the land has formed the basis of all civilisations which have built or farmed and continues to underpin every piece of architecture, infrastructure, rural, urban or mining development. Cadastral land surveyors ensure the integrity of Australian property boundaries, legally defining the dimensions of new and existing land, reserves, easements and strata titles.

What is land surveying and property development | UNSW ...

A property surveyor determines the precise location of roads, buildings, and other features of a specific property. This information is then used to determine any changes to the property line, restrictions on what may be built or where new structures must be located, how large structures may be, and the appropriate building depths for foundations.

What Does a Property Surveyor Do? - Redfin

The surveyor will usually certify that the buildings and other improvements, alterations, and repairs to your property that exist at the time of the survey are not in violation of laws or other restrictions.

Provides a full overview for students and professionals, examining each stage of the development process. There are new chapters on planning and sustainability, continued focus on appraisal techniques with worked examples, updated content on sensitivity testing and funding mechanisms, and new self-assessment questions with model answers.

From initial consideration to final marketing, this book provides a complete overview of the essential steps in the property development process making it a must-have resource for students and professionals in property finance and development, planning, surveying and construction. Covering site-finding, valuation, funding and construction, the book examines each step of the process in the context of property development, avoiding overly technical jargon and explaining concepts clearly. This second edition has been revised and updated throughout, taking into account the effects of the credit crunch on development activity and funding. The authors also discuss changes in policy, thinking and practice which have stemmed from a desire by all stakeholders in the development process to foster more sustainable property developments.

Property Finance is an accessible and comprehensive guide to the field of property finance, linking the practicalities of property and construction with an understanding of core financial structures and concepts. It introduces the key components of real estate investment and development cycles, and explores the interconnected roles of the financial services industry, property companies, joint ventures, banks, and real estate developers. For this edition, a new co-author, Mark Daley, has been brought on board. He brings a wealth of knowledge and teaching experience to this well-established textbook. An ideal book for students undertaking real estate or construction-related degrees, it is also useful for personal study or further information and help in this particular area of finance.

Since the publication of the first edition of Property Investment almost 15 years ago, the property sector has undergone some significant shifts that investors must now factor into their investment choices. In this thoroughly updated second edition, the authors address the issues that have risen to prominence in recent years including • the impact of the credit crunch • the growing importance of sustainability • the growth of buy-to-let investment • the introduction of Real Estate Investment Trusts (REITs). This trusted book provides an essential overview of strategies for investment, markets and appraisal, making it an ideal read for any student or professional working in property investment, property funding, real estate and land management. Concepts are explained with great clarity and the authors use worked examples to elucidate key principles where possible, enabling readers to develop their knowledge of the sector and to strengthen their understanding of the challenges that lie ahead for property investors.

The third edition of Property Valuation Techniques offers a comprehensive and student-friendly exploration of the application of property valuation and appraisal techniques. Thoroughly revised and re-structured, it covers topics including risk, residential lease extensions, enfranchisement and cash flows. This third edition - provides more material on sustainability in relation to property value - uses a wealth of worked examples to apply theory to real-world problems - includes tips on how to structure appraisals in Excel® spreadsheets - features self-assessment questions to test and reinforce your understanding Detailed yet accessible, Property Valuation Techniques is ideal reading both for those students new to the subject and those looking to extend their knowledge, and for practitioners looking to refresh and develop their understanding of property valuation.

Property Finance provides an overview of the field, linking the areas of property and construction with an understanding of financial structures and concepts. The aim is to present an insight and a strategy for understanding and learning about these concepts and structures, and to introduce the reader to the institutions in the market which provide finance for real estate investment and development.

This book covers partnerships in the broadest sense, presenting a critical account of the whole range of partnerships in property development. The emphasis is on the relationship between developers and landowners, developers and funders, and the provision of public services through the use of private finance. The authors draw on their own professional experience of running property partnerships and, with carefully researched case studies, present the ‘insider’ view, making a potentially dry and complex subject accessible and lively. The book moves beyond a theoretical overview and, by illuminating the reality of property partnerships shows for example, exactly how the government is procuring schools, hospitals and roads. This clear and objective analysis sets property partnerships in their economic and political contexts and will be of topical interest to surveyors and developers - in both private practice and local authorities - as well as to funders. Students in surveying, estate management and real estate development will also find this a concise and authoritative guide. Contents 1 The Public and Private Sectors 2 The Property Development Process 3 Partnership Negotiations using Development Appraisal Techniques 4 The Private Finance Initiative 5 Public Private Partnerships: the Urban Experience of Dublin 6 Property Funding Partnerships 7 Development Partnerships and Landowners 8 International Trends and Public Private Partnerships 9 Economic Background and Future Trends

This book provides an overview to the context of property development so that students and professionals can examine the stages of development in the process. The stages are developed from initial consideration to site finding, general appraisal, valuation, funding, construction and marketing. In providing the context for development the author is able to focus on two key areas of the process: appraisal and finance. New ideas, concepts and techniques are introduced in considering the valuation of development properties, cash flow approaches, computer applications and risk analysis. In the area of finance, up to date information on the sources of development finance and the criteria for lending is provided. Project-based funding is examined in detail, as well as corporate funding and institutional investors. Joint venture arrangements and property companies are also discussed. A final section of the text deals with financial management. The book will appeal to a wide readership among students and practitioners in the built environment, especially those studying or involved in estate management, property funding and development, planning, surveying and construction.
