File Type PDF Runge Kutta Method Example Solution

Kutta method here after called as RK method is the generalization of the concept used in Modified Euler's method. In Modified Eulers method the slope of the solution curve has been approximated with the slopes of the curve at the end points of the each sub interval in

File Type PDF Runge Kutta Method Example Solution

computing the solution.

Differential equations - Runge-Kutta method

The simplest example of an implicit Runge – Kutta method is the backward Euler method: $y_{n+1} = y_n + h f (t_{n+1}, y_{n+1})$.

File Type PDF Runge Kutta Method Example Solution

$$y_{n+1} = y_n + hf(t_n + h, y_n)$$

The Butcher tableau for this is simply:

Runge – Kutta methods - Wikipedia

$$y(h) = y(0) + (1/6 k_1 + 1/3 k_2 + 1/3 k_3 + 1/6 k_4)h = y(0) + m$$

File Type PDF Runge Kutta Method Example Solution

h. The value of this final estimate for the given example is $y^*(h) = 2.0112$. This is quite close to the exact solution $y(h) = 3e^{-2(0.2)} = 2.0110$. Note: As stated previously, we generally won't know the exact solution as we do in this case.
