## 16-2 Evolution as Genetic Change

Natural selection affects which individuals survive and reproduce and which do not. Evolution is any change over time in the relative frequencies of alleles in a population. Populations, not individual organisms, can evolve over time.

## 16-2 Evolution as Genetic Change Change

Section 16–2 Evolution as Genetic Change This section explains how natural selection affects different types of traits. It also describes how populations can change genetically by chance as well as the conditions that prevent populations from changing genetically.

Evolution of Populations 397 16–2  
Evolution as Genetic Change A genetic view of evolution offers a new way to look at key evolutionary concepts. Each time an organism reproduces, it passes copies of its genes to its offspring. We can therefore view evolutionary fitness as an organism's success in passing

## Section 16 2 Evolution As Genetic Change

16–2 Evolution as Genetic Change  
Natural selection acts on individuals.  
Evo-lution acts on populations.  
Natural selec-tion acting on individuals leads to the evolution of populations. Natural selection on a trait controlled by a single gene with two alleles can cause one allele to increase and the other allele to decrease. Natural selection ...
