**Einstein's Theory of Special Relativity | Space**

Einstein ' s theory of special relativity created a fundamental link between space and time. The universe can be viewed as having three space dimensions — up/down, left/right, forward/backward — and one time dimension. This 4-dimensional space is referred to as the space-time continuum.

Special relativity was originally proposed by Albert Einstein in a paper published on 26 September 1905 titled " On the Electrodynamics of Moving Bodies ".

Alternative Title: special theory Special relativity, part of the wide-ranging physical theory of relativity formed by the German-born physicist Albert Einstein. It was conceived by Einstein in 1905. Along with quantum mechanics, relativity is central to modern physics.

Special Relativity Special relativity is a theory proposed by Albert Einsteinthat describes the propagation of matter and light at high speeds. It was invented to explain the observed behavior of electric and magnetic fields, which it beautifully reconciles into a single so-called electromagnetic field, and also to resolve a number of paradoxes

**Special Relativity -- from Eric Weisstein's World of Physics**

We have now reviewed the developments in the physics of moving bodies, of light, of electricity and magnetism that brought the physics that Einstein found when he began to think about ether, electricity, magnetism and motion. It was pondering these developments that led Einstein to discover the special theory of relativity in 1905.

**Einstein's Pathway to Special Relativity**

In developing special relativity, Einstein began by accepting what experiment and his own thinking showed to be the true behaviour of light, even when this contradicted classical physics or the usual perceptions about the world. The fact that the speed of light is the same for all observers is inexplicable in ordinary terms.

**Relativity - Special relativity | Britannica**

This is like a "transition to theoretical physics" book where stuff you already know (special relativity) and a lot of stuff you don't (supersymmetry, relativistic quantum theory, gravitation, strings) is introduced and put in a wider context of what modern physicist's talk about.

Eventually, Albert Einstein published in September 1905 what is now called special relativity, which was based on a radical new application of the relativity principle in connection with the constancy of the speed of light.

**Criticism of the theory of relativity - Wikipedia**

Special relativity (or the special theory of relativity) is a theory in physics that was developed and explained by Albert Einstein in 1905. It applies to all physical phenomena, so long as gravitation is not significant. Special relativity applies to Minkowski space, or "flat spacetime" (phenomena which are not influenced by gravitation).

**Newtonian Physics vs. Special Relativity**

Einstein ' s special theory of relativity (special relativity) is all about what ' s relative and what ' s absolute about time, space, and motion. Some of Einstein ' s conclusions are rather surprising. They are nonetheless correct, as numerous physics experiments have shown.
