??The Geography of Thought ??????????. Everyone has the same basic cognitive processes. When people in one culture differ from those in another in their beliefs, it can't be because they have different cognitive processes, but because they are exposed to different aspects of the world, or because they have been taught different things.

The Geography of Thought Quotes Showing 1-13 of 13 "The Chinese believe in constant change, but with things always moving back to some prior state. They pay attention to a wide range of events; they search for relationships between things; and they think you can't understand the part without understanding the whole.

When Richard Nisbett showed an animated underwater scene to his American students, they zeroed in on a big fish swimming among smaller fish. Japanese subjects, on the other hand, made observations about the background environment...and the different "seeings" are a clue to profound underlying cognitive differences between Westerners and East Asians. As Professor Nisbett shows in The Geography of Thought people actually think - and even see - the world differently, because of differing ecologies, social structures, philosophies, and educational systems that date back to ancient Greece and China, and that have survived into the modern world. As a result, East Asian thought is "holistic" - drawn to the perceptual field as a whole, and to relations among objects and events within that field. By comparison to Western modes of reasoning, East Asian thought relies far less on categories, or on formal logic; it is fundamentally dialectic, seeking a "middle way" between opposing thoughts. By contrast, Westerners focus on salient objects or people, use attributes to assign them to categories, and apply rules of formal logic to understand their behaviour.

A "landmark book" (Robert J. Sternberg, president of the American Psychological Association) by one of the world's preeminent psychologists that proves human behavior is not "hard-wired" but a function of culture. Everyone knows that while different cultures think about the world differently, they use the same equipment for doing their thinking. But what if everyone is wrong? The Geography of Thought documents Richard Nisbett's groundbreaking international research in cultural psychology and shows that people actually think about—and even see—the world differently because of differing ecologies, social structures, philosophies, and educational systems that date back to ancient Greece and China. As a result, East Asian thought is "holistic"—drawn to the perceptual field as a whole and to relations among objects and events within that field. By contrast, Westerners focus on salient objects or people, use attributes to assign them to categories, and apply rules of formal logic to understand their behavior. From feng shui to metaphysics, from comparative linguistics to economic history, a gulf separates the children of Aristotle from the descendants of Confucius. At a moment in history when the need for cross-cultural understanding and collaboration have never been more important, The Geography of Thought offers both a map to that gulf and a blueprint for a bridge that will span it.

An award-winning professor of psychology examines the divergent ways in which eastern and western cultures view the world, offering suggestions about how today's interdependent global cultures may be bridged. Reprint. 15,000 first printing.

Philosophy in the American West explores the physical, ecological, cultural, and narrative environments associated with the western United States, reflecting on the relationship between people and the places that sustain them. The American West has long been recognized as having significance. From Crèvecoeur's early observations in Letters from an American Farmer (1782), to Thoreau's reflections in Walden (1854), to twentieth-century thoughts on the legacy of a vanishing frontier, "the West" has played a pivotal role in the American narrative and in the American sense of self. But while the nature of "westernness" has been touched on by historians, sociologists, and, especially, novelists and poets, this collection represents the first attempt to think philosophically about the nature of "the West" and its influence on us. The contributors take up thinkers that have been associated with Continental Philosophy and pair them with writers, poets, and artists of "the West". And while this collection seeks to loosen the cords that tie philosophy to Europe, the traditions of "continental" philosophy—phenomenology, hermeneutics, deconstruction, and others—offer deep resources for thinking through the particularity of place. This book will be of great interest to students and scholars of Philosophy, as well as those working in Ecocriticism and the Environmental Humanities more broadly.

Tag along on this New York Times bestselling "witty, entertaining romp" (The New York Times Book Review) as Eric Winer travels the world, from Athens to Silicon Valley—and back through history, too—to show how creative genius flourishes in specific places at specific times. In this "intellectual odyssey, traveler's diary, and comic novel all rolled into one" (Daniel Gilbert, author of Stumbling on Happiness), acclaimed travel writer Weiner sets out to examine the connection between our surroundings and our most innovative ideas. A "superb travel guide: funny, knowledgeable, and self-deprecating" (The Washington Post), he explores the history of places like Vienna of 1900, Renaissance Florence, ancient Athens, Song Dynasty Hangzhou, and Silicon Valley to show how certain urban settings are conducive to ingenuity. With his trademark insightful humor, this "big-hearted humanist" (The Wall Street Journal) walks the same paths as the geniuses who flourished in these settings to see if the spirit of what inspired figures like Socrates, Michelangelo, and Leonardo remains. In these places, Weiner asks, "What was in the air, and can we bottle it?" "Fun and thought provoking" (Miami Herald), The Geography of Genius reevaluates the importance of culture in nurturing creativity and "offers a practical map for how we can all become a bit more inventive" (Adam Grant, author of Originals).

Lucy lives on the twenty-fourth floor. Owen lives in the basement. It's fitting, then, that they meet in the middle -- stuck between two floors of a New York City apartment building, on an elevator rendered useless by a citywide blackout. After they're rescued, Lucy and Owen spend the night wandering the darkened streets and marveling at the rare appearance of stars above Manhattan. But once the power is back, so is reality. Lucy soon moves abroad with her parents, while Owen heads out west with his father. The brief time they spend together leaves a mark. And as their lives take them to Edinburgh and to San Francisco, to Prague and to Portland, Lucy and Owen stay in touch through postcards, occasional e-mails, and phone calls. But can they -- despite the odds -- find a way to reunite? Smartly observed and wonderfully romantic, Jennifer E. Smith's new novel shows that the center of the world isn't necessarily a place. Sometimes, it can be a person.

Argues that much of what surrounds Americans is depressing, ugly, and unhealthy; and traces America's evolution from a land of village commons to a man-made landscape that ignores nature and human needs.

Part travel memoir, part humor, and part twisted self-help guide, The Geography of Bliss takes the reader across the globe to investigate not what happiness is, but WHERE it is. Are people in Switzerland happier because it is the most democratic country in the world? Do citizens of Qatar, awash in petrodollars, find joy in all that cash? Is the King of Bhutan a visionary for his initiative to calculate Gross National Happiness? Why is Asheville, North Carolina so damn happy? In a unique mix of travel, psychology, science and humor, Eric Weiner answers those questions and many others, offering travelers of all moods some interesting new ideas for sunnier destinations and dispositions.

In this engaging and spirited book, eminent social psychologist Robert Levine asks us to explore a dimension of our experience that we take for granted—our perception of time. When we travel to a different country, or even a different city in the United States, we assume that a certain amount of cultural adjustment will be required, whether it's getting used to new food or negotiating a foreign language, adapting to a different standard of living or another currency. In fact, what contributes most to our sense of disorientation is having to adapt to another culture's sense of time. Levine, who has devoted his career to studying time and the pace of life, takes us on an enchanting tour of time through the ages and around the world. As he recounts his unique experiences with humor and deep insight, we travel with him to Brazil, where to be three hours late is perfectly acceptable, and to Japan, where he finds a sense of the long term that is unheard of in the West. We visit communities in the United States and find that population size affects the pace of life—and even the pace of walking. We travel back in time to ancient Greece to examine early clocks and sundials, then move forward through the centuries to the beginnings of "clock time" during the Industrial Revolution. We learn that there are places in the world today where people still live according to "nature time," the rhythm of the sun and the seasons, and "event time," the structuring of time around happenings(when you want to make a late appointment in Burundi, you say, "I'll see you when the cows come in")Levine raises some fascinating questions. How do we use our time? Are we being ruled by the clock? What is this doing to our cities? To our relationships? To our bodies and psyches? Are there decisions we have made without conscious choice? Alternative tempos we might prefer? Perhaps, Levine argues, our goal should be to try to live in a "multitemporal" society, one in which we learn to move back and forth among nature time, event time, and clock time. In other words, each of us must chart our own geography of time. If we can do that, we will have achieved temporal prosperity.

Why do some men become convinced—despite what doctors tell them—that their penises have, simply, disappeared. Why do people across the world become convinced that they are cursed to die on a particular date—and then do? Why do people in Malaysia suddenly "run amok"? In The Geography of Madness, acclaimed magazine writer Frank Bures investigates these and other "culture-bound" syndromes, tracing each seemingly baffling phenomenon to its source. It's a fascinating, and at times rollicking, adventure that takes the reader around the world and deep into the oddities of the human psyche. What Bures uncovers along the way is a poignant and stirring story of the persistence of belief, fear, and hope.
