Parrington won the 1928 Pulitzer Prize in history for the first two volumes of his Main Currents in American Thought. This biography traces his intellectual development from his childhood, through his mid-life association with William Morris, to his late career at the University of Washington.

Like all living things, plants require nutrient elements to grow. The Plant Nutrition Manual describes the principles that determine how plants grow and discusses all the essential elements necessary for successful crop production. The nutritional needs of plants that add color and variety to our visual senses are addressed as well. Altogether, nutritional requirements are given for 143 plants grouped in seven categories from food crop plants to ornamentals. The text begins with an introduction to the basic principles of plant nutrition. Chapters 2 and 3 describe the roles of the major elements and micronutrients. The last two chapters describe techniques for determining the nutrient element status of growing plants through plant analysis and tissue tests. The Plant Nutrition Manual is loaded with information on what plants need for normal vigorous growth and development-free of nutritional stress.

Mitsubishi Pajero 2000 to 2010, Petrol/Gasoline and Diesel engines including Common Rail and Turbo with World Wide Specs. This manual has over 500 pages. It has step by step instructions in every chapter. Covering both model produced the Station Wagons and tray models.

H.S.V. (Holden Special Vehicles), are produced from Australia G.M.-Holden vehicles. Cars are modified to suit the enthusiast market, high performance V8's, body kits, performance suspension, up market interior all add to the finishing touches. This is an informative book on HSV Supercars.

Perception and Artistic Style explores the role of visual processes in the creation and perception of painting and drawing. By looking at the relationship between perception and representation evidence is provided that purely visual processes are a richer source of artistic inspiration than is commonly realised. Many of the obvious variations in artistic style are firmly rooted in visual perception and visual cognition. This book looks at a range of fundamental visual processes and investigates their contribution to major stylistic features of works of art. A wide selection of pictures is considered; ancient, medieval, renaissance, nineteenth and twentieth century and primitive, and both well known and relatively obscure works are examined. The volume includes 86 figures, 13 grey-scale illustrations of artworks and 43 line drawings. This book will be of value to students of perception, students of art and art history, and, since the more technical aspects have been confined to the notes, the general reader who wishes to increase his/her appreciation and understanding of pictorial art.

This is an introduction to the mathematical foundations of uncertain reasoning.
